

The Seasons

spring

summer

autumn

winter

Each year we experience these four seasons.

The seasons are caused because the **Earth is spinning on a tilt.**

Spring

Spring is usually in the months **March, April and May**. In spring the days start to get longer and a bit warmer. New plants grow and the **trees grow their leaves back.**

Many animals **have babies** such as birds, cows, sheep and ducks.

summer

Summer is usually in the months **June, July and August**. In summer the **days are at their longest** and the **weather is the warmest.**

The trees are **full of leaves.**

autumn

Autumn is usually in the months **September**, **October** and **November**. In autumn the amount of time it is light becomes less which means it gets **darker earlier**. The leaves start to **change colour** and **fall off the trees**.

winter

Winter is usually in the months **December**, **January** and **February**. In winter we have colder weather, **sometimes snow** and frost. The trees have no leaves and the amount of time it is light during the **day is at its shortest**.
